Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 16 and 18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Rudy (4506460).

RUdy shows a shoe comprising an upper (41), a wear sole (43), a first reinforcement element (51) which is spaced from a second upper reinforcement element (53), and a flexible foam coupling/intermediate sole (45) as claimed.

In reference to the use of adhesive for attaching the elements to the flexible coupling, Rudy clearly intends the use of adhesive to be the well known and inherent method for attaching the elements (see column 10 lines 40-45).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rudy in view of Luthi (6199303).

Art Unit: 3728

Rudy shows a shoe comprising an upper (41), a wear sole (43), an upper (i.e. second) reinforcement element (53), and a flesible foam intermediate sole (45) substantially as claimed except for a first sole reinforcement element. Luthi teaches providing a sole reinforcement element (10) located in a sole assembly in any layer (see column 5 lines 25-35). It would have been obvious to provide a sole reinforcement in any layer of the sole of Rudy to provide reinforcement and motion control to the entire length of the foot. In reference to the exact spacing of the two reinforcement elements, since Luthi states that the exact layered placement of the sole reinforcement is not important and the claimed separation distance of less than 5mm is considered to be a common range for a thin layer of a sole element, it would have been obvious to space the elements less than 5mm apart.

Allowable Subject Matter

- 5. Claim1, 3-15, 19, and 20 are allowed.
- 6. Claim 21 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 1. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). Other useful information can be obtained at the PTO Home Page at www.uspto.gov.

In order to avoid potential delays, Technology Center 3700 is encouraging FAXing of responses to Office Actions directly into the Center at (572)272-8300
